

EURO 2-SECTION PLINTH

The EURO Series 2-section manipulation table represents excellent value for money, offering a range of quality features and benefits.

This model features an excellent range of operating heights and uses high quality European actuators, as well as German made gas struts at the back section, making adjusting easy and accurate. It also offers double sided lifting arms which provides a firm, non-flexing lifting mechanism.

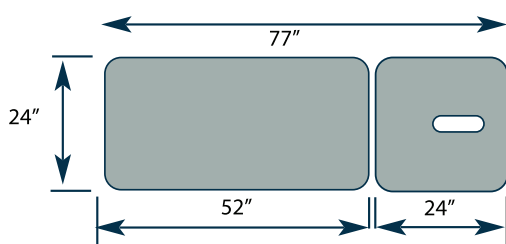

The lifting mechanism is fitted with quality bearings, therefore no grinding of metal on metal, ensuring long-lasting durability for your table!

The EURO two section model has adjustable back through the range of -35° to 80°. A breathing hole is supplied in the head section of the table. Retractable wheels are standard.

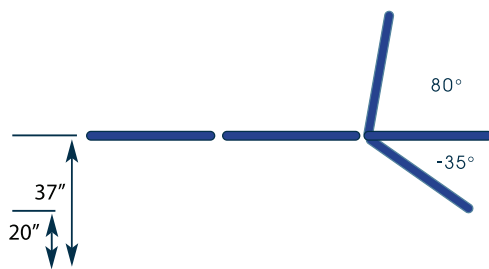

The base of the table allows extra clearance underneath, for the legs of a patient hoist or lifting device to slide under the table.

Back section fitted with gas struts for effortless adjusting

Moving parts of lifting mechanism fitted with bearings for extra durability
