Bowie-Dick Helix Test

Steriliser Test for Hollow Loads and Bench-top Sterilisers (Class B)

Bowie & Dick Test is a test for successful air removal from high vacuum porous load steam autoclave sterilisers. Even color change of the sheet indicates an even penetration of saturated steam in the sterilisers. It is essential to check the steam autoclave sterilisers daily, preferably every cycle to ensure a perfect sterilisation condition.

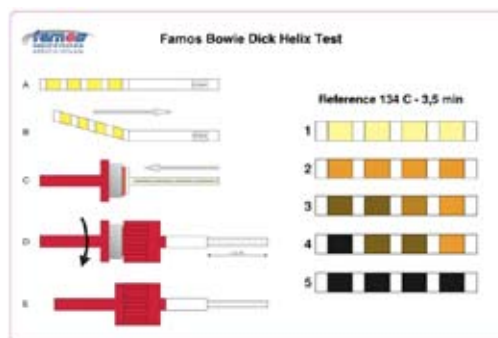

Small bench top steam sterilisers cannot be tested with a Bowie-Dick Test pack. Therefore EN 867-Part 5 and ISO 11140 defines a Helix PCD based Steam Penetration Test as an alternative for the Bowie-Dick Test. The Helix simulates the most difficult sterilisation conditions, because it imitates a long, narrow-bore instrument.

Famos designed a red lid for the Helix PCD device and marked the chemical indicators with red, not to let any mix-up with lot control PCD and indicators.

Bowie Dick Helix Test features:

- Accurate and reproducible results
- Easy to use and document
- Cost effective test and environmentally friendly
- Best interpretation of color change from yellow to black
- Helix PCD complies to EN867 Part 5 and ISO 11140
- Indicators copy to ISO 11140 Class 2
- Ink is free of any toxic component
- Non reversible indicator
- Suitable for use in conjunction with SASCI
