See more, disturb less

14 days undisturbed healing\textsuperscript{1-6} and less pain at dressing changes
Mepitel® One
– the easy way to minimise interruptions to healing\textsuperscript{1–3}

Transparent Mepitel One is an exciting new development in the quest to minimise interruptions to healing. An innovative one-sided self-fixating contact dressing, Mepitel One lets you give the healing process the time it needs – and minimises pain for the patient on removal.

Avoiding the need for dressing removal can help minimise patient pain and unnecessary disturbance to the healing process\textsuperscript{1–3}. Mepitel One improves your ability to make critical assessments of the wound without needing to remove the dressing.

**Impressively conformable**, ensuring an excellent fit and maximum patient comfort\textsuperscript{7, 8}

**Mepitel One is convenient** to work with even while wearing gloves. It adheres quickly, gently and securely – saving time and minimising patient discomfort

**Effective open mesh design** enables free transfer of exudate to the secondary dressing and delivery of topical treatments to the wound bed\textsuperscript{12–14}

**Does not leave residue** on the wound and maintains its functional qualities longer than other dressings – up to 14 days\textsuperscript{1–6}

**Safetac® technology** minimises pain at dressing changes and the spread of exudate that causes maceration and delays healing\textsuperscript{9–11}
Safetac is a patented adhesive technology that is less painful for the patient at dressing removal and less traumatic to the wound. Safetac technology hurts less because it:

1) tacks gently to dry surfaces, like skin, but not to moist surfaces, such as open wounds
2) moulds to the skin’s pores, covering more skin surface and spreading peel forces on removal to prevent skin stripping
3) seals the wound margins, ensuring exudate does not spread to the surrounding skin and minimizing maceration

Mepitel® dressings are the self-adhering contact dressings proven to cut costs. The results of three randomised controlled trials demonstrate that, compared to traditional dressings, Mepitel dressings are significantly more cost-effective in terms of:

- Reducing the overall cost of care
- Reducing the number of dressing changes
- Reducing the time needed to change dressings

Mepitel® dressings have a substantial amount of published data demonstrating its clinical and cost-effectiveness for a wide range of wounds.

Undisturbed healing for a wide range of wounds

Quality care at its most cost effective

Safetac® technology is less painful

Removal of a dressing with traditional adhesive. Epidermal cells are stripped, causing wound trauma and pain.

Removal of a dressing with Safetac technology. No skin-stripping.
Clinically tested and proven over time

Mepitel® is the original advanced wound contact layer. Since creating the dressing category in 1990, Mölnlycke Health Care has produced more than 80 million pieces of Mepitel and developed an innovative new version in Mepitel® One. Health care practitioners worldwide continue to choose Mepitel over competing dressings because they are the only ones that create an ideal wound healing environment while preventing wound adhesion and minimising pain at dressing changes.

Mepitel’s comprehensive library of clinical evidence supports their choice. A recent publication reported that there are in excess of 20 articles demonstrating the clinical efficacy and safety of Mepitel, including data from five randomised controlled trials.18

Mepitel One is available in the following range of sizes:

<table>
<thead>
<tr>
<th>Art. No.</th>
